

rPlay for iOS - a ChromeCast receiver submitted to Apple Store

Posted by huisinro - 2013/08/31 12:40

I submitted an app to Apple store, called rPlay, which does Chromecast emulation. The app is being reviewed right now. Here is the description:

"rPlay turns your iPhone/iPad/iPod into a chromecast device, so you can stream music and video from another device using chromecast enabled apps, such as YouTube and Google Music, etc. You can in turn stream from your iOS device to your Apple TV, this way, you can stream chromecast media to your Apple TV."

I hope Apple can approve this FREE app.

It supports YouTube/GoogleMusic/Custom Apps, chrome tab browsing is not there yet due to the lack of features in Safari browser.

This is a YouTube video:

Hi Karma,

How to get install rPlay on android phone?

Can you please provide link to download and activate file to try on my android phone?

Can you please help license to try on Android phone/tab and iPhone?

First, thanks for writing this app!

However, I installed it and it is not being recognized by any of my chromecast-enabled apps. It simply doesn't show up in the list of chromecast devices. There aren't many options so I'm not sure what I could have messed up.

Thanks!
