

3D not working properly

Posted by mase123y - 2010/03/07 07:23

Ive been reading the forums and it seems like the 3D acceleration doesnt work right with 64 bit hosts but I havent read any updates in a while. I installed Second Life but it fails to run. Is there any news that might get the 3D working on 64 bit?

It works for me in a XP VM under Win7 x64. Did you enable 3d Acceleration in the virtual machine settings? It's off by default.

enable 3d?

Posted by flexx21 - 2011/07/19 02:46

can you tell me how to enable the 3d acclerations?

Shut the VM down and open the VMLite selector window. Click on the Settings button and select Display from the category list on the left. Under Extended Features there should be Enable 3D Acceleration checkbox simply check it. You will also need to ensure that you have allocated at least 30MB of Video memory for it to work

You can either click on the VMLite icon that appears in the system tray and select "Show Selector Window" or simply click on VMLite Workstation from the Start menu
